

A Macat analysis of Baruch Spinozas Ethics

Widely accepted as a philosophical masterpiece, *Ethics* by Baruch Spinoza (in Latin, Benedictus de Spinoza) sets out to explain nothing less than the nature of God, the world, and how we should live. Rejecting some of the most deeply held presuppositions of classical and medieval thought, Spinoza makes the radical claim that God and the universe in fact comprise one substance with infinite attributes. The text is famously complex. Spinoza writes with an elaborate and self-referential matrix of definitions and propositions, unfolding across five sections. *Ethics* was finished in 1674, but it was not published until after Spinoza's death in 1677, and was largely shunned for decades. Although clearly a product of the seventeenth-century European Enlightenment period, it is also strikingly original in its metaphysics and is virtually unparalleled in its scope. *Ethics* has influenced a tradition of philosophy extending through such important figures as G. W. F. Hegel, Friedrich Nietzsche, and Gilles Deleuze.
