

Central Works of Philosophy v2 (Volume 2)

Central Works of Philosophy is a major multi-volume collection of essays on the core texts of the Western philosophical tradition. From Platos Republic to Quines Word and Object, the five volumes range over 2,500 years of philosophical writing covering the best, most representative, and most influential work of some of our greatest philosophers, each of them primary texts studied at undergraduate level. Each essay has been specially commissioned and provides an overview of the work, clear and authoritative exposition of its central ideas, and an assessment of the works importance then and now. Each essay equips the reader with the resources and confidence to go on to read the works themselves. Together these books provide an unrivaled companion for studying and reading philosophy, one that introduces the reader to the masterpieces of the western philosophical canon and some of the greatest minds that have ever lived talking about the profoundest most exciting problems there are. The seventeenth and eighteenth centuries saw a brilliant outpouring of philosophical thought unprecedented in human history. Together philosophy and science pushed medieval and Renaissance scholasticism aside to lay the foundations of the modern world. Beginning with Descartes Meditations, the contributors examine some of the periods most seminal philosophical texts: Spinozas Ethics, which presents a complete picture of reality that has at its heart how we can be good, the Monadology, in which Leibniz describes what must underpin reality if it is to be fully explained, Hobbes Leviathan, which reminds us of the dangers of the unchecked brutality of humanity; Rousseaus Social Contract, a vision of how human nature can be changed for the better in a new society, Lockes Essay Concerning Human Understanding which wishes us to grasp that we must make knowledge our own through experience not authority,

Berkeleys attack on materialism in his Treatise and Humes search for rational justification for our most basic beliefs about the world in his Treatise of Human Nature. Together these essays offer students a remarkable survey of the key texts and core ideas that make up the age of rationalism and empiricism.
