

Informing Innovation: Tracking Student Interest in Emerging Library Technologies at Ohio University

Informing Innovation: Tracking Student Interest in Emerging Library Technologies at Ohio University (A Research Report) by Char Booth, examines one institution's efforts to move away from technolust and towards a culture of assessment. It presents findings from an environmental scan conducted at Ohio University, which investigated the convergence of students, libraries, and emerging information, communication, and academic tools. The author uses survey data to test generational and demographic assumptions that often guide technology development in academic libraries. The identification of student behaviors related to emerging and social technologies and the implications indicated by those behaviors are central to this study. The need for local user assessment is a fundamental message in this volume, which shares practical research strategies and methods with the reader. University and college libraries can use this case study and its appended survey instrument template to conduct similar investigations on their campuses. Foreword by Dr. Joan K. Lippincott, Associate Executive Director, Coalition for Networked Information (CNI)
