

Problematic Youth Group Involvement as Situated Choice: Testing an Integrated Condition-Controls-Exposure Model

The present study deals with young adolescents involvement in what is generally referred to as a problematic youth group. This book develops an overarching metatheoretical framework that is useful for the development and testing of integrated models. The authors describe an integrated Conditions-Controls-Exposure model and present descriptive and theorytesting analyses. Special attention is paid to the end-to-end integration of the micro ecological setting, social controls (social bonds, monitoring, school social bond), personal controls (moral beliefs, locus of control and self-control), and the situational context. The implications of the findings for future research are discussed. *** Librarians: ebook available [Subject: Sociology, Criminology, Youth Studies]
